The 24 Game is a mathematical card game where the objective is to find a way to manipulate four numbers to get the result of 24. These four numbers are typically single digits from 1 to 9. Rules of the 24 Game Use each of the four numbers exactly once Use only basic arithmetic operations: addition (+), subtraction (-), multiplication (x), and division (+) The final result must equal 24 Parentheses can be used to change the order of operations Mathematical Representation The general form of a 24 Game solution can be represented as:  $((a \circledcirc b) \circledcirc c) \circledcirc d = 24$  Where  $\{a\}$ ,  $\{b\}$ ,  $\{c\}$ , and  $\{d\}$  are the four given numbers, and  $\{\circledcirc\}$  represents one of the four basic arithmetic operations. Example Calculation Let's solve the 24 Game for the numbers 3, 3, 8, and 9: A correct solution is:  $((3 + 8 = 11) \times 3 \times 11 = 33) \times (33 - 9 = 24)$  Step-by-step calculation:  $(3 + 8 = 11) \times 3 \times 11 = 33) \times (33 - 9 = 24)$  Verification:  $(24 = 24)$  This example correctly results in 24, demonstrating a valid solution to the 24 Game. Visual Representation 24 Game Solution Process 3 8 9 Step-by-step solution: 1.  $3 + 8 = 11$  2.  $3 \times 11 = 33$  3.  $33 - 9 = 24$  Final:  $(3 \times (3 + 8)) - 9 = 24$  This diagram shows the four numbers (3, 3, 8, 9) used in the 24 game, the target number 24, and the correct solution. Solved: 0Score: 0Time: 00:00A: Yes always! The chosen sets of numbers always form 24.A: Yes! The 2048 game on MathTechLab is fully responsive, mobile-friendly and works on all devices.A: Yes! Challenge your friends to see who can solve it fastest.
